

the following task would be needed in the development and maintenance/delivery phase:

Technical Task:

#TASK

Task Name

Web/Android development

To build web and app suitable to launch that platform

Database Management

To maintain data from users

Algorithm design to analyse the data

From which it's possible to analyse data more efficiently

Programming

Coding and software design

Interface work

Non-Technical Work:

Before implementation:

1.study of transportation and other area climates /crops grown in that area etc & business/organisation/markets where they can sell their crops at local and state/national level.

During implementation:

1. Make people aware of the platform as more connection it have more beneficial it would be.

After Implementation/maintenance:

- 1.survey of scopes of improvement.
- 2.work on feedback

The interface means work on technology that make the interaction more convenient to the user, like adding features like SMS/calls via cellphone could update database.
